

TomTom and Delphi Technologies Collaborate on Intelligent Driving Solutions

January 4, 2019

CES Las Vegas, January 4, 2019 TomTom ([TOM2](#)), the location technology specialist, today announces that it is collaborating with Delphi Technologies ([DLPH](#)), to help powertrains become predictive. The vehicle's powertrain control system will be enriched with TomTom's maps so it knows what's up ahead. Map data such as speed limits and road gradient combine to control a vehicle's speed, reducing energy consumption and helping to improve safety.

Antoine Saucier, Managing Director, TomTom Automotive, comments: "Making every journey safe and comfortable is only one part of the puzzle - making them as efficient as possible is a huge challenge too. Our collaboration with Delphi Technologies will help us to deploy our maps to optimize every journey by reducing vehicle fuel consumption and emissions."

Join TomTom at CES - January 8-11, 2019. North Hall, Booth #5226.

ENDS

We at TomTom are excited to share the news about our collaboration with Delphi Technologies, which is in line with TomTom strategy and is beneficial to our long-term development. This collaboration will have no material financial impact on this year's revenue.

About TomTom

TomTom is the leading independent location technology specialist, shaping mobility with highly accurate maps, navigation software, real-time traffic information and services.

To achieve our vision of a safer world, free of congestion and emissions, we create innovative technologies that keep the world moving. By combining our extensive experience with leading business and technology partners, we power connected vehicles, smart mobility and, ultimately, autonomous driving.

Headquartered in Amsterdam with offices in 37 countries, TomTom's technologies are trusted by hundreds of millions of people worldwide.
