## TomTom launches toll reporting to help transport companies manage costs

**November 19 2013** – TomTom Business Solutions has launched new road toll reporting functionality for its fleet management platform, providing transport companies with greater cost transparency for all European routes.

WEBFLEET truck toll reporting provides a real-time breakdown of the toll costs incurred for each trip, allowing transport companies to better manage expenses and provide customers with transparent invoices.

The functionality accounts for all applicable national tolls in France, Germany, Austria and Slovakia. It will also cover the proposed French Ecotaxe, reporting on the CO2 emissions for each trip and estimating the total costs.

"Cost management is crucial for transport companies who are operating on tight profit margins," said Thomas Schmidt, Managing Director, TomTom Business Solutions.

"TomTom's latest feature provides actionable data that enables businesses to demonstrate precisely where and when toll charges have been incurred, vital particularly if these costs are to be passed on to the customer."

WEBFLEET truck toll reporting adds to TomTom's suite of applications designed specifically for the transport sector, providing users with a complete fleet management solution.

This includes connectivity with the truck's FMS interface for comprehensive diagnostics reporting and the ability to send pre-defined routes to a driver's navigation device. Meanwhile, WEBFLEET Tachograph Manager supports remote and manual download, archiving and analysis of tachograph data.

TomTom's fleet management solution is also capable of integrating with the leading route-planning software, as well as a host of other office applications.

Truck toll reporting will be available from today as a paid add-on to TomTom's standard WEBFLEET platform.
